**NOTES**

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly potential damage areas of small size, or all parameters, features outside Special Flood Hazard Areas.

Cartographic areas not in Special Flood Hazard Areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and averaged between cross sections. The floodways were based on hydrologic conditions which may vary from requirements of the Federal Emergency Management Agency.

Floodway widths in some areas may be too narrow to allow for scale. Floodway widths are provided in the Flood Insurance Study Report.

Coastal base flood elevations apply only to the shoreline.

Elevation reference marks are described in the Flood Insurance Study Report.

Corporate limits shown are current as of the date of this map. The user should contact appropriate county officials to determine if corporate limits have changed since the date of this map.

For community map revision history and to copyright mapping, see Section 101 of the Flood Insurance Study Report.

For additional map panels see secondary printed Map Index.
